PREVIEW project
explores the
intersection between
remote working,
remote education and
remote internship

- Remote working has become increasingly frequent in public and private organizations. These new ways of working imposed significant changes in organizational structures, processes and competences.
- Remote education may support universities to cultivate student employability skills for remote working arrangements characterized by physical distance and ICTs usage.
- Remote internship period may become a potentially pivotal instrument to provide students, through on-the-field experience, with flexible and supportive opportunities to develop digital and non digital skills for remote working.

PREVIEW Objective

The project envisages the design, development and testing of an **innovative path** which, through remote internships and other e-Learning by doing activities, will enable students and graduates to **develop the employability competences required by the remote working** scenario.

Students and graduates will be trained -through e-learning activities- with competences to address the challenges of distance and effectively work in remote working context.

Subsequently, they will have the **opportunity to applicate these competences during remote internships** and verify to what extent they are able to work in a remote context.

PREVIEW Methodology

PREVIEW Expected results

- Design and test a PREVIEW path for Remote Internship.
- Promoting a shift in the University Partners from in-person to a remote internship;
- Facilitating access to international work experiences to students and graduates from disadvantaged areas.
- Equip students and graduates and education operators with skills to effectively perform in the remote workplace.
- Establish a strong partnership among University and Tourism and Cultural Heritage business associations to exchange expertise in different fields and to improve the quality of remote internships.
- Support enterprises involved in the project in transition to remote working
- Improvement of knowledge about new methodologies, tools and technologies as educational means for supporting teachers and students to develop digital and soft skills and competences
- Stimulating virtual forms of collaboration and communication among students, university teachers and company representatives.

PREVIEW Added value

PREVIEW

Experiences and challenges

- To ensure the sustainability of the PREVIEW path for remote internship
 - we negotiated between different national regulations and university procedures to provide a common methodology;
 - Preview platform focused on the remote training and internship; referred mainly to communication and collaboration systems already in use in universities and companies to increase technology acceptance; technology rigidity to implement changes in the path.
- Multi-disciplinarity as an opportunity and a threat.
- Different degree of experience of partners in European funding and in administrative and accounting matters.
